Fernando Agustín Alfaro

Software Engineer

alfarofernando@live.com · +54 9 11 5260-6455 · GitHub · LinkedIn · WhatsApp

PROFESSIONAL PROFILE

Full-stack Software Engineer with professional experience in Java/Spring Boot, Angular/TypeScript, SQL, and system integrations. I complement that background with React and Node.js in personal and freelance projects. Worked across finance, ERP, logistics, messaging, and internal platforms, including production support, performance work, and CI/CD.

TECHNICAL SKILLS

Professional experience: Java, Spring Boot, Angular, TypeScript, JavaScript, SQL, MySQL, MariaDB, REST, SOAP/XML/WSDL, Git, Linux, CI/CD, JWT, Nginx, Swagger/OpenAPI, Ionic, Node.js/TypeScript

Applied experience: React, React Native, Docker, Firebase, Jest, JUnit/Mockito, WebSocket, SSE, Systemd, VPS

Training and complementary knowledge: Python, FastAPI, Django, PHP, Laravel, PostgreSQL, MongoDB, AWS, Kubernetes

PROFESSIONAL EXPERIENCE

NetOne / BarloventoTech · Software Engineer · Tier 1 → Tier 2

December 2025 - September 25, 2026

- Implemented and maintained full-stack features across business products and Java services.
- Worked with Angular/TypeScript, SQL, REST/SOAP APIs, and external integrations.
- Resolved functional and production issues, reviewed queries, and improved workflows.
- Contributed to testing, code reviews, documentation, CI/CD, and Linux operations.
- Contributed push-notification traceability to an existing Node.js/TypeScript service; I do not present it as an original build.

PROJECT EXPERIENCE

PROFESSIONAL PROJECTS

Wise Capital / gFondos

Java, Angular 18, TypeScript, SQL, Firebase, REST, WebSocket, Ionic

Context: Financial product developed within the professional NetOne / BarloventoTech context.

Contribution scope: Backend and frontend development, including Ionic/Angular experiences for web, Android, and iOS across six related repositories presented as one case.

Full-stack contributions to a financial ecosystem for investments, accounts, and portfolio management.

Contributions:

- Implemented and maintained trading, account, transaction, and financial validation flows.
- Worked on pricing, portfolios, eCheq, and risk and compliance-related features.
- Resolved authentication, UI state, and real-time communication issues.
- Contributed to Ionic/Angular application workflows across its web, Android, and iOS versions.

Outcomes and scope:

- Improved financial workflows and resolved functional issues across web, app, and services.
- Applied Java, Angular, Ionic, SQL, Firebase, and WebSocket experience in a cross-platform financial product.

Netegia N4

Java, Angular, TypeScript, SQL, JPA/Hibernate, REST, Firebase, SSE

Context: Business management platform maintained at NetOne / BarloventoTech.

Contribution scope: Full-stack development and maintenance across Java services and an Angular application.

Evolution of a business management platform covering API migration, work orders, onboarding, and integrations.

Contributions:

- Contributed to the migration of public APIs from N3 to N4 and work order workflows.
- Implemented changes to onboarding, CRM/WhatsApp, and alerts.
- Investigated performance, N+1, count-query, and pagination issues, as well as reports and exports.

Outcomes and scope:

- Functional improvements to operations and support for the API version transition.
- Applied optimizations and diagnostics to queries and frequently used workflows.

BarloGOW / Wareg

Java, Angular 19, TypeScript, Evolution API, ARCA/AFIP, OCR, GitHub Actions

Context: Business product in the BarloventoTech environment, with a Java backend and Angular frontend.

Contribution scope: Full-stack development and project-scoped technical leadership, supporting another developer.

Collections, campaign, and messaging features integrating WhatsApp, OCR, and operational interfaces.

Contributions:

- Worked on WhatsApp linking, delivery states, and the Evolution API interaction engine.
- Contributed to authentication, catalog, campaign, and OCR invoice-processing workflows.
- Handled data cleanup, background tasks, and CI/CD integration.

Outcomes and scope:

- Improved traceability and diagnosis for messaging and connected processes.
- Applied experience with collections systems and tax and communications integrations.
- Project-scoped technical leadership combined with hands-on implementation, not software-factory-wide management.

MS GBP · ERP Middleware

Java 25, Spring Boot 3, SOAP, XML/WSDL, REST, MariaDB, JPA, JWT, OpenAPI

Context: Integration middleware for ERP and Global Blue Point business functions.

Contribution scope: Built the microservice from scratch, developed its integrations, and handled deployment and environment configuration.

Java microservice connecting applications to ERP operations through REST APIs and SOAP services.

Contributions:

- Integrated query, authentication, product, pricing, and sales-order operations with SOAP/WSDL services.
- Worked on REST contracts, SQL persistence, and tenant-scoped JWT authentication.
- Documented and validated interfaces with Swagger/OpenAPI and build/deployment tooling.

Outcomes and scope:

- Clearer integration contracts between REST consumers and ERP SOAP services.
- Applied error handling, security, and persistence in a recent microservice.
- End-to-end build and deployment responsibility was stated by the developer; full external-provider validation is not assumed.

MS Logistics · Zuiden

Java 25, Spring Boot, REST, SQL/JPA, JWT, Multi-tenant, Idempotency

Context: Backend microservice connecting the order domain to logistics provider Zuiden.

Contribution scope: Built the microservice from scratch, developed its integrations, and handled deployment and environment configuration.

Logistics integration for catalog, order lookups, and shipping status through REST services.

Contributions:

- Worked on endpoints for products, availability, orders, shipments, and tenant configuration.
- Contributed to order idempotency and provider resolution through gateways.
- Added exchange traceability and correlation to support troubleshooting.

Outcomes and scope:

- Integration workflows with persisted state and retry safeguards.
- Applied REST, multi-tenancy, observability, and external error-state handling.
- End-to-end build and deployment responsibility was stated by the developer; full external-provider validation is not assumed.

Notifications Microservice

Node.js, TypeScript, Firebase, Docker, Jest, GitLab CI, Swagger

Context: Node.js and TypeScript notification microservice.

Contribution scope: Scoped contribution to push-delivery traceability changes.

Messaging and push notification service using Firebase, with failure-focused delivery traceability.

Contributions:

- Added traceability for push deliveries and limited it to relevant failure cases.
- Kept audit coverage focused on the push workflow.
- Worked in a service using Docker, Jest, GitLab CI, and Swagger documentation.

Outcomes and scope:

- Improved diagnosis of push delivery failures without extending logs to unrelated flows.

• Professional, focused experience with Node.js/TypeScript and Firebase.

AFIPMS · Tax Services

Java, Maven, SOAP, SQL, AFIP/ARCA, XML

Context: Business service with SOAP clients for electronic invoicing and tax registries.

Contribution scope: Scoped changes to tax queries and responses within the audited repository.

Maintenance of Java services integrated with AFIP SOAP tax APIs.

Contributions:

• Worked on AFIP status queries and tax information persistence.
• Adjusted taxpayer ID query restrictions to meet service requirements.
• Maintained compatibility with SOAP/XML clients in the tax ecosystem.

Outcomes and scope:

• Targeted improvements to tax service status and returned data handling.
• Applied experience with SOAP integrations and external service behavior.

Rendición · Legacy Application

Java, Maven, WAR, SQL, XML, PowerShell, Windows scripts

Context: Legacy web application using Maven and manual deployment resources.

Contribution scope: Updated deployment documentation and scripts within the audited scope.

Operational maintenance tasks for a Java WAR application while preserving existing behavior.

Contributions:

• Prepared build and operational guidance and scripts.
• Worked with Maven profiles and web.xml regeneration.
• Adjusted XML configuration while preserving mappings required by the legacy system.

Outcomes and scope:

• Clearer operational documentation and controlled deployment changes.
• Hands-on maintenance of Java WAR applications and inherited configuration.

Shared Components

Java, Maven, SQL, UTF-8, Shared libraries

Context: Shared artifact in an internal application ecosystem.

Contribution scope: Targeted fixes and completion of a documented encoding migration.

Maintenance of a Java/Maven library shared by business applications.

Contributions:

• Adjusted a status selector to preserve the expected legacy styling.
• Applied a scoped rollback to SQL scripts.
• Closed UTF-8 migration tasks in shared components.

Outcomes and scope:

• Components and data resources aligned with existing behavior.
• Applied experience with cross-application compatibility and shared dependencies.

Intranet · Scoped Work

Java, Maven, JSP, JavaScript, SQL, HTML/CSS

Context: Business application using JSP, JavaScript, SQL, and operational scripts.

Contribution scope: The audited direct evidence covers project setup and initial configuration.

Limited exposure to an internal Java/JSP web application and its legacy resources.

Contributions:

• Participated in initial configuration tasks.
• Reviewed technical context around JSP components, editors, and image handling.
• Kept the public scope limited to the available evidence.

Outcomes and scope:

• Practical exposure to internal web applications and legacy technologies.
• This page does not claim ownership of the full product.

EIMO

React, TypeScript, Vite, Node.js, Strapi, PostgreSQL, REST

Context: Ongoing freelance modernization of a private education portal; the migration is not presented as complete or as a verified production deployment.

Contribution scope: Frontend and API development on working branches for the portal evolution and webinar workflows.

Ongoing freelance migration of an education portal from WordPress to React, Node.js, Strapi, and PostgreSQL.

Contributions:

- Worked on the React/Vite frontend and its integration with the Strapi-based API.
- Contributed to webinar workflows and contracts/validation between the web admin and API services.
- Participated in the transition from WordPress to React, Node.js/Strapi, and PostgreSQL.

Outcomes and scope:

- The migration remains in progress; the test portal is not presented as production or as a completed solution.
- For the reviewed branches, local tests and builds were reported passing; manual review and publication remained pending as of October 2026.

OPERATIONS AND INTEGRATIONS

AdrogueBus / Fonobus

React Native, Java, MySQL, Power BI exports, Performance analysis

Context: Known technical work on a React Native app and Java/MySQL back office; no usable local Git history was available.

Contribution scope: Support, analysis, and feature changes within known tickets.

Support and functional improvements for a transit application and its management tools.

Contributions:

- Worked on statuses, filters, and exports for reporting and Power BI.
- Analyzed workflows with $O(n^2)$, N+1, and synchronous notification issues.
- Reviewed an Excel export issue in driver settlement reports.

Outcomes and scope:

- Diagnosed bottlenecks and opportunities for performance improvements at scale.
- The source inventory classifies this experience as known, not Git-audited.

Evolution API · WhatsApp Operations

Evolution API, Node.js, Linux, TLS, VPS, WhatsApp

Context: Cross-cutting operational work known across test and production environments.

Contribution scope: Technical support and diagnosis; no separate employer or product is claimed.

Operational troubleshooting of instances, certificates, and delivery states in WhatsApp integrations.

Contributions:

- Investigated connectivity, QR/code linking, and actual delivery status.
- Reviewed environment differences and TLS/fullchain certificates.
- Worked with retries, line warm-up, traceability, and instance operations.

Outcomes and scope:

- Improved diagnosis of gaps between middleware acceptance and WhatsApp delivery.
- Operational experience with Evolution API, Node.js, and Linux services.

INDEPENDENT PRODUCTS

CVGenio

React 19, TypeScript, Vite, AI APIs, VPS, Product design

Context: Personal B2C/B2B digital product developed from 2024 through June 2026; the project ended in June 2026.

Contribution scope: Product development, frontend, AI integration, deployment, and user experience work.

Personal product for creating and analyzing résumés with AI-assisted workflows.

Contributions:

- Built workflows for uploading and processing résumés and job descriptions.
- Integrated AI models with usage limits, token handling, and staged orchestration.
- Worked on UX, performance, VPS deployment, and product experimentation.

Outcomes and scope:

- Personal product with B2C and B2B workflows, completed in 2026.
- Practical experience with AI costs, prompting, document processing, and operating a small VPS.

Portal SGU · Urban Guard

Next.js (MVP), Angular 21.2, Java 21, Spring Boot 3.5, MySQL 8, Ubuntu, Nginx, JWT, Audit

Context: Personal Next.js MVP initially used by the director of the Urban Guard in La Matanza; later migrated to Angular and Java/Spring Boot with MySQL and deployed to a VPS.

Contribution scope: Full-stack development of the MVP and its evolution; the current repository uses Angular 21.2, which is not independent verification of the deployed version.

Independent operational management product evolved from a Next.js MVP into an Angular and Java/Spring Boot application backed by MySQL.

Contributions:

- Built the initial Next.js MVP and evolved the product when the Urban Guard director began using it.
- Implemented users, roles, vehicles, personnel, periods, attendance, shift sheets, and auditing with Java/Spring Boot, Angular, and MySQL.
- Configured and troubleshot the Ubuntu/Nginx application on a VPS; this is presented as an independent project, not municipal employment.

Outcomes and scope:

- Initial operational adoption by the area director followed by evolution into a full-stack application deployed on a VPS.
- The current local repository records Angular 21.2; the exact production version has not been verified.

Alfa:dev

Software development, Product exploration, Freelance

Context: Independent activity reported to have existed for approximately two years.

Contribution scope: Umbrella initiative for software products and work; no undocumented clients or contracts are claimed.

Independent initiative bringing together personal projects, freelance software development, and product exploration.

Contributions:

- Built and maintained personal products at different stages.
- Explored needs, scope, and feasibility for software solutions.
- Applied full-stack development and delivery practices to independent initiatives.

Outcomes and scope:

- Consolidated practical learning in software development and product work.
- No clients, contracts, or exclusive stack are claimed on this page.

Chusmeando

Angular 22, Ionic 9, Capacitor 8, TypeScript, Java 25, Spring Boot 4, MySQL 8.4, JPA/Hibernate, Playwright, OpenAPI

Context: Personal product with an advanced local implementation and release gates still open as of October 10, 2026; not deployed for real users.

Contribution scope: Product design and full-stack development of an MVP for local discovery, listings, and WhatsApp contact.

In-development local Android marketplace with an Ionic/Angular app, Java/Spring Boot backend, and location-aware catalog.

Contributions:

- Developed the Android app with Angular, Ionic, and Capacitor, covering buyer, seller, and admin workflows.
- Implemented REST APIs and business rules in Java/Spring Boot for profiles, stores, listings, location, and moderation.
- Worked on OpenAPI/TypeScript contracts, WebP image optimization, security rules, and automated suites.

Outcomes and scope:

- The MVP remains in development and is not presented as deployed or published on Play Store; physical Android validation and staging/release gates remain open.
- The October 10 local report recorded 208 backend tests, 169 Angular tests across 54 files, CI utilities 20/20, and Playwright smoke 1/1 plus regression 18/18.

COMPLEMENTARY PROJECTS

Portfolio V1

HTML, CSS, Bootstrap, JavaScript

Context: Complementary project retained from the previous portfolio.

Contribution scope: Personal development; available project media shows the visual result.

An earlier version of my personal website built with core web technologies.

Contributions:

- Built a personal website using HTML, CSS, Bootstrap, and JavaScript.
- Organized profile and project content in a web interface.
- Kept the version as an example of portfolio evolution.

Outcomes and scope:

- Practical foundation in layout and web development.
- This page does not add unverified deployment or outcome claims.

AlfaTeam

React, React Router, Tailwind CSS, Vite, PHP

Context: Project with available screenshots and frontend repository.

Contribution scope: Web development work shown in the project's own assets.

Interface for an asynchronous learning platform, presented as a complementary project.

Contributions:

- Developed a React interface with navigation and form components.
- Worked with Tailwind CSS, Vite, and UI libraries listed in the project.
- Retained screenshots showing available screens and workflows.

Outcomes and scope:

- Demonstrates practice with React interfaces and component composition.
- Security, backend, or purchase-flow claims are omitted unless verified.

StorePC

React, Vite, Node.js, Express, MongoDB, JWT, Mongoose

Context: Independent e-commerce project developed in 2024 by a three-developer team.

Contribution scope: Full-stack development and coordination of a three-developer team during the project.

Complementary e-commerce project with a React interface and related MERN services.

Contributions:

- Built e-commerce services/APIs and business logic with Node.js/Express and MongoDB/Mongoose.
- Developed the React/Vite interface with navigation, filters, and catalog workflows.
- Coordinated work across three developers and integrated frontend components with the APIs.

Outcomes and scope:

- Personal product experience with hands-on development, small-team coordination, and full-stack integration over NoSQL persistence.
- No exclusive authorship of the repository or all its parts is claimed.

NoteIt

React, TypeScript, Tailwind CSS, Redux Toolkit, Express, Prisma, MySQL, Node.js, JWT

Context: Personal full-stack project developed from 2024 to 2025, with an Express backend built from scratch.

Contribution scope: Developed the notes REST API, JWT authentication, MySQL/Prisma persistence, and integration with the React frontend.

Notes web application with a React interface and a TypeScript/Express backend.

Contributions:

- Built the Node.js/Express backend and a REST API for notes from scratch.
- Implemented JWT authentication, password hashing, and Prisma/MySQL persistence.
- Integrated notes workflows with the React/TypeScript interface and Redux Toolkit UI state.

Outcomes and scope:

- Hands-on Node.js backend development from scratch and a full-stack workflow with relational persistence.
- Production deployment is not claimed without further evidence.

Ateneos - API/Web refactor

Strapi, Node.js, React, TypeScript, REST APIs

Context: Contributions on dedicated API and web branches with commit authorship verified. Client/employer relationship and integration into main are unconfirmed.

Contribution scope: Backend and web refactoring within the Ateneos module scope, without a client-contract or deployment claim.

Refactoring of an education module across API and web branches, focused on contracts, validation, and security.

Contributions:

- Reworked API validation and controller-service-repository flows to preserve required, absent, and null field semantics.
- Worked with allowlisted DTOs and permission checks to limit entity exposure and protect recording access.
- Aligned the web admin with the module API contracts, messages, and validation states.

Outcomes and scope:

- Commits on the API/web branches are attributed to Fernando; merge to main and deployment are not verified.

- The scope is described as a module refactor without assigning it to EIMO or another client/employer.

ENGINEERING PRACTICE

- REST and SOAP/XML integrations across financial and ERP systems, AFIP/ARCA, logistics, Firebase, and WhatsApp messaging.
- Production debugging and support, SQL queries, N+1 issues, pagination, idempotency, JWT authentication, and external error handling.
- Testing and QA, code reviews, technical documentation, Git, CI/CD, Linux, Docker, Nginx, and deployments.
- Use of Codex/ChatGPT to explore codebases, plan, debug, refactor, and document, with human code review and behavior validation.

EDUCATION

University Technician in Programming - National Technological University, Avellaneda Regional Faculty · 2023-2025

Full Stack MERN Program - National Technological University, Villa María Regional Faculty · 2024

LANGUAGES

B1 / Intermediate: technical documentation reading and written communication; prepared spoken communication.
